JolSetu — Voice Recording Script

Xylem Global Student Innovation Challenge 2026 · Water Quality · University track · Total narration ≈ 2 min 45 sec in 15 clips

How to record (5 minutes of setup)

1. **Where:** a small room with curtains/bed (less echo). Fan/AC off. Phone in airplane mode.
2. **How:** phone mic 15–20 cm from your mouth, slightly to the side. Speak like you are explaining to a friend — not like reading news.
3. **Format:** record each clip separately (or one non-stop file — I can cut it). WAV/M4A/MP3 anything is fine. Stay 5 cm still before and after each clip (easy cutting).
4. **Send to me:** WhatsApp/Google Drive. Name them clip-01, clip-02, … (or just send in order). I will clean, time and merge them into the video — the music, screen recordings and subtitles stay as they are.
5. **Timing:** each clip has a target length. If you are a little over/under — do not worry, I auto-fit the visuals to your voice.

Say it right

JolSetu	JOL-say-too (“jol” = water, “setu” = bridge)
Araihazar	ah-roi-ha-zor (the upazila in Narayanganj)
Q R / G P S / A I	spell the English letters: “kew-arr”, “jee-pee-ess”, “ay-eye”
Numbers	written in words exactly as they should be spoken — read as written
Dashes (—)	take a short pause (half a second)
Araihazar	a real sub-district near Dhaka where scientists tested thousands of wells — our demo data comes from there

— All 15 clips start on the next page. Read each one 2–3 times aloud BEFORE recording. —

CLIP 01 · Title — opening (~11 sec)

On screen: *slide: JolSetu title on village photo*

“JolSetu — the people's bridge to safe water. Our entry for the Xylem Global Student Innovation Challenge twenty twenty six, in the Water Quality category. By Rudra Sarker.”

Delivery: *Calm, confident, welcoming. Pause after 'safe water'. Say 'JolSetu' as JOL-say-too.*

CLIP 02 · The problem (~14 sec)

On screen: *slide: 20M / 24,000+ / US$13B stats*

“In Bangladesh, arsenic in groundwater is called the largest poisoning of a population in history. Twenty million people drink unsafe water — and more than twenty four thousand die every year.”

Delivery: *Slow and serious. Stress 'largest poisoning' and 'twenty million'. Short pause at the dash.*

CLIP 03 · Why nothing changes (~11 sec)

On screen: *slide: Tested once. Misread. Silence.*

“Ten million wells were tested — but only once. The results sit on paper. People read the test by eye. And when a well fails, families have nowhere to go.”

Delivery: *Slightly sad tone on 'only once'. Emphasise 'nowhere to go'.*

CLIP 04 · The data knows (~12 sec)

On screen: *slide: 6,593-well real map figure*

“But the data already knows. Every dot is a real tubewell from Araihazar, tested in a laboratory — six and a half thousand of them. More than half are unsafe.”

Delivery: *Brighten your tone on 'But the data already knows'. Say 'Araihazar' as ah-roi-ha-zor.*

CLIP 05 · The four steps (~16 sec)

On screen: *slide: Read / Stamp / Learn / Walk cards*

“JolSetu does this in four simple steps. Read — your camera becomes the testing machine. Stamp — every result is signed with a Q R code and checked by G P S. Learn — the map gets smarter with every test. Walk — straight to the nearest safe well.”

Delivery: *Punch each key word: READ... STAMP... LEARN... WALK... Take a half-second pause at every dash.*

CLIP 06 · DEMO — kit reader (~12 sec)

On screen: *screen recording: pad photo to 100 ug/L UNSAFE*

“Watch. We take a photo of a one dollar test kit — and JolSetu reads it instantly. A hundred micrograms per litre. Unsafe. And the phone says it out loud, in Bangla.”

Delivery: *Energetic — this is the wow moment. Say 'a hundred micrograms per litre' clearly (it matches the screen). Pause before 'Unsafe'.*

CLIP 07 · DEMO — QR check-in (~12 sec)

On screen: *screen recording: honest passes, cheater rejected*

“Every result comes with a Q R code, and the phone must be within thirty metres of the well. An honest check in — passes. Someone cheating from five hundred metres away — is rejected.”

Delivery: *Playful contrast: say 'passes' bright, 'rejected' firm and final. 'Cheating' = reporting a test without visiting the well.*

CLIP 08 · DEMO — live map route (~11 sec)

On screen: *screen recording: route to safe well*

“The map shows every real well near you. Press one button — and it gives the distance, direction and walking time to the nearest tested safe well. It even works without internet.”

Delivery: *Smooth and reassuring. Stress 'tested safe well' and 'without internet'.*

CLIP 09 · Depth lesson (~13 sec)

On screen: *slide: depth chart (76 percent down to 11 percent)*

“And here is a life saving lesson: the deeper the well, the safer the water. Seventy six percent of shallow wells are unsafe — but below one hundred fifty feet, only eleven percent.”

Delivery: *This is the wisdom moment — slow down. Big contrast between 'seventy six' and 'only eleven'.*

CLIP 10 · Human eyes vs AI (~12 sec)

On screen: slide: 943 kit-vs-lab scatter

“People make mistakes when reading the test. In nine hundred forty three real comparisons, thirty seven percent of safe wells were marked unsafe by mistake. A I reading fixes that.”

Delivery: Say 'A-I' as letters. Stress 'by mistake' — that is the problem AI removes.

CLIP 11 · The learning map (~11 sec)

On screen: slide: model - queue - tests diagram

“And the map learns. The computer finds the risky areas, and tells testers where to go next. Every single test makes the whole map smarter.”

Delivery: Upbeat, intelligent tone. Emphasise 'learns' and 'smarter'.

CLIP 12 · Impact (~13 sec)

On screen: slide: $11 / 18 years / 94M cards

“And the impact is real. Just eleven dollars per person can give a family safe water — and ninety four million people across Asia are waiting for the same help.”

Delivery: Confident. Pause at the dash; lift your voice on 'ninety four million'.

CLIP 13 · Xylem fit (~11 sec)

On screen: dark slide: last mile of water quality

“For Xylem, this is the missing last step of water quality. Every test kit becomes a sensor. Every phone becomes a reader. Twenty million wells — watching over twenty million families.”

Delivery: Steady and warm. Smile while saying 'watching over twenty million families'.

CLIP 14 · Roadmap (~9 sec)

On screen: slide: 8-week timeline

“In eight weeks, we go from a small pilot to real proof: schools with test kits, a public record anyone can check — and real numbers that show the impact.”

Delivery: Crisp and fast-paced — momentum. One breath is enough.

CLIP 15 · Closing (~10 sec)

On screen: dark slide: Join us on the bridge + links

“Twenty million people don't need another warning. They need a bridge. JolSetu — join us. The demo is live, today.”

Delivery: Slow. Powerful. Pause after 'warning' and after 'bridge'. End strong, not fading.

Clip timing summary (targets — I auto-fit if you differ)

Clip	Target	Clip	Target
CLIP 01	~11 sec	CLIP 02	~14 sec
CLIP 03	~11 sec	CLIP 04	~12 sec
CLIP 05	~16 sec	CLIP 06	~12 sec
CLIP 07	~12 sec	CLIP 08	~11 sec

CLIP 09	~13 sec	CLIP 10	~12 sec
CLIP 11	~11 sec	CLIP 12	~13 sec
CLIP 13	~11 sec	CLIP 14	~9 sec
CLIP 15	~10 sec		

After you send the clips: I clean the audio, sync every clip to its visuals, keep the subtitles, and re-render the final video with YOUR voice — then show you before any submission.
